Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a container, classified in class 220 , subclass 660.
- II. Claims 9-11, drawn to a process of molding a container, classified in class 264.
- III. Claims 12-13, drawn to a process of using a container with washing machine, classified in class 68.

The inventions are distinct, each from the other because

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the articles of group I can be made by compression molding.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the container of group I can be used for packing any desired product.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications and their recognized divergent

subject matter and the search required for one invention is not required for the other invention, therefore , restriction for examination purposes as indicated is proper.
